SUMMARY

Computer science graduate with internship and co-op experience investigating application issues, building Python services, and automating workflows. Hands-on experience with Git, GitHub Actions, Docker, AWS, and PostgreSQL. Seeking to help engineering teams resolve technical blockers and reduce repetitive work as a Developer Support Engineer at Aurora.

TECHNICAL SKILLS

Developer tools: Git, GitHub Actions, CI/CD, Docker, AWS, Vercel
Troubleshooting & testing: Cross-service debugging, error handling, request validation, regression testing
Integrations & automation: REST APIs, JSON, OAuth, Google Calendar API, n8n, OpenAI integrations
Data & reporting: SQL, PostgreSQL, MongoDB, operational dashboards, data modeling
Programming: Python, JavaScript, TypeScript, Go

EXPERIENCE

Himal Design — Contract Software Engineer | Remote
April 2026–July 2026

- Delivered an internal operations dashboard that consolidated Etsy, Amazon, and Faire listings, inventory counts, and active orders into one view.
- Organized order details and product images in a filterable interface, reducing manual marketplace lookups during packing and shipping.
- Implemented paginated data imports and Etsy OAuth authentication with token refresh to connect marketplace data with PostgreSQL.

SpotDrop — Software Engineer Co-op | San Francisco, CA
August 2025–December 2025

- Worked with engineers, founders, and product stakeholders to clarify requirements, investigate cross-service issues, and deliver updates in weekly sprints.
- Built asynchronous processing to synchronize Google Calendar schedules with PostgreSQL.
- Updated Laravel REST endpoints to support features in the application's map interface.

Dreamable — Software Engineer Intern | San Francisco, CA
May 2025–July 2025

- Built Python services using FastAPI, SQLAlchemy, Pydantic, and PostgreSQL to manage AI-generated workflow records.
- Implemented request validation and soft deletion to reject invalid inputs and preserve workflow records.
- Automated content summarization and Slack reporting using n8n and OpenAI integrations, reducing repetitive reporting work.

SELECTED PROJECTS & CONTRIBUTIONS

ALFV Collections — Deployed Web Application
Live application | Source code

- Launched a platform used by 50+ registered users to manage collections, save wishlist items, and view estimated portfolio values.
- Processed 10,000+ sales records to estimate values for 500+ collectibles, weighting recent transactions and reducing the influence of price outliers.

OpenSupplyHub — Open-Source Contributor | May 2026

- Fixed a React interface bug that prevented API error messages from appearing, making request failures visible to users.
- Added React Testing Library regression tests to verify error rendering and prevent the issue from recurring.

EDUCATION

University of San Francisco — B.S. in Computer Science
May 2026 | GPA: 3.7
Relevant coursework: Computer Networks, Data Structures and Algorithms
